# MS10™ Series

## Mobile Document Shredders

TASKMASTER® Shredder Hopper

MS10 Mobile Document Shredders employ TASKMASTER shredding technology to quickly and efficiently reduce high volumes of documents en-masse.

### Unique Versatility

With three distinct models, there's an MS10 tailored to your specific needs. Our trucks are available for non-cdl as well as cdl drivers. Whichever model you choose, you can be assured that each MS10 is built with the finest components and expert American craftsmanship.

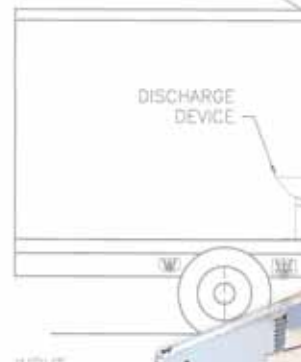

### Offering More Power

Each MS10 truck offers a fully installed and integrated hydraulic shredding system driven by the truck's own powerful engine. Included with each model is a powerful TASKMASTER twin shaft shredder, an effective auger compactor, fast payload discharge system and a system controller.

These powerful shred trucks rip through reams of documents, printouts, booklets, notebooks, cdroms and more, ten to 100 times more efficiently than typical shredders. They can quickly reduce documents for entire departments, agencies or corporations.

1. The MS10 work room
2. The MS10XL's cart tipper's dump position
3. The MS10XL's conveyor feed system
4. The tightly packed discharged paper
5. Quality shredder components
6. Documents in the MS10XL feed system
7. The MS10 and MS10c side lift gate
8. The MS10XL's sophisticated control and video system.
9. The spacious interior of the MS10
10. The auger compactor

## Three System Models

### The MS10

The MS10 features a "walk-in" design with a 33000 gvwr 250HP chassis, automatic transmission, hydraulic power, automatic side lift gate, auger compactor, dump body and more. Payload capacity is up to 8,500 lbs.

### The MS10c

The MS10c features the same powerful shredding system as the MS10 but in a 25999 gvwr chassis suitable for non-cdl drivers in most states. This unit still carries up to 5500 lbs. of payload.

### The MS10XL

The MS10XL features a unique curbside lift system and fully automatic operation. With the unique conveyor system, cart loads of paper are meter fed to the shredder for ease of use and optimal performance. An advanced operator control system coordinates all shredding functions. Payload capacity is up to 9000 lbs.

**MS10**

### Engineering

Franklin Miller's full staff of mechanical and electrical engineers employed over 30 years of engineering experience to develop the latest in mobile shredding technology.

### Convenient Dischargers

Dump Body: The MS10 and the MS10c feature fast and clean dump bodies.

Moving Wall: The MS10XL features a moving wall.

### Cart Lift System

The MS10XL features a highly compact and efficient cart tipper for curbside operation. The lift system works through the side wall (not the roof). Unique security doors enclose all shredding.
